

Chuck Norris Jokes.

> What is this?

This is the result of a Brief at Hyper Island. Using APIs, I've created a website presenting randomized Chuck Norris jokes. The site is created for entertainment and just for fun.

> How it works

The API is brought to you by ICNDb, the Internet Chuck Norris Database - because obviously, there is one of those. I mean, this is the Internet. Cred to the creators of the API. Source;

<http://www.icndb.com/api/>

The creation was structured and styled in HTML/CSS, and the connection to the API and the feature was made in JavaScript. The files and details can be found at GitHub: rebeccalind.

> Reflection

The biggest struggle of this project was to find the correct API with the features that I was looking for, and thereafter to find the appropriate way to extract a certain part of it, at a certain time. I decided to make the array randomized, whereas any joke can be presented and the array will be refreshed after every action.
